

The files are located in:

SN Cirrus - ProjectsSN - Audio Post Production - Wisconsin Life - 2026-06-09 Goats Kaukauna

These are multichannel MOV files with black video. Disregard the image. I had an issue recording embedded timecode to the original wav files so I recorded the audio timecode signal as part of the wav. I decoded that timecode into a program that created the MOV's with the audio channels and the correct embedded timecode. Sorry for the inconvenience but it should work fine. Just drop it onto the project like normal.

The tracklist is:

1. Headphone Mix L
2. Headphone Mix R
3. Boom (Weird Sounding, not useable)
4. Audio Timecode (Do not use!)
5. Angela Lav
6. Guest Lav

I'm not sure what was happening, but the boom didn't sound great. The Lavs were lovely though.

Let me know if you need any help cleaning this up.

Thanks for the lovely trip
Andy
